sanas

# Introducing Sanas:

## The World's First Speech Understanding Platform

### The Contact Centers Crossroad

Today's contact centers are at a critical juncture. Aggressive cost-cutting through automation has led to customer dissatisfaction. While consumers demand human interaction, building domestic call centers presents time and capital barriers. Offshore solutions, often plagued by communication gaps due to accent barriers, lead to customer churn, agent discrimination, and identity erasure through accent neutralization training. The problem isn't the people, it's the connection between them.

### Bridging the Divide through Innovation, Not Erasure.

Sanas offers a refreshingly human approach to contact center communication by leveraging speech-to-speech AI to create adaptive technology for clear conversations. Our real-time accent translation allows agents to speak naturally while customers hear a noise-free voice aligned with their familiar linguistic patterns. This preserves agent identity and fosters clearer communication.

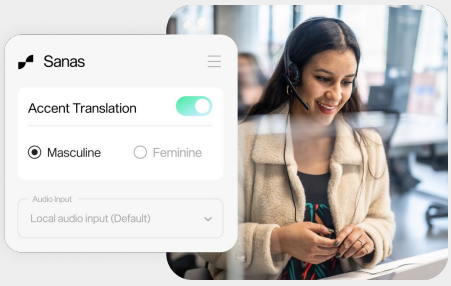
# Sanas Real-Time Speech Understanding Platform

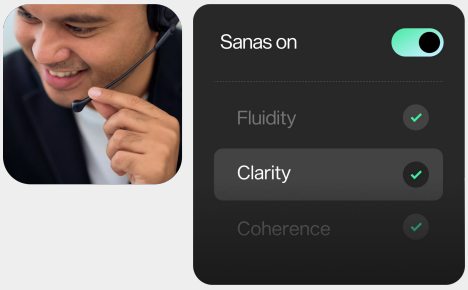
## Real-time Accent Translation

AI-powered technology that translates accents in real-time, ensuring clear and natural communication.



## Noise Cancellation

Enterprise-grade noise cancellation for both agent and customer sides, enhancing clarity and reducing frustration.



- **Seamless Integration:** Highly secure speech-to-speech technology that doesn’t record call data and easily integrates with existing contact center systems.
- **Identity Preservation:** Unlike traditional accent training that can lead to "cultural erasure", Sanas allows agents to retain their authentic voice and cultural identity.
